KDEV

Personal technologies for digital Communication

Who we are

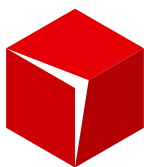

In the era of "Information Society", communicating means especially knowing how to effectively exploit channels and tools made available by latest digital technologies.

KDEV assists the customer in the achievement of its specific targets, thanks to our ability to design, develop and deploy effective solutions in a short time, through an optimal combination of hardware and software technologies.

KDEV works in the realm of internet services distribution, consulting, mobile apps and software development, especially in industrial area.

Our services

- all-in-one hardware devices (FoxBox);
- SMS/MMS/e-mail gateway;
- mobile App (iOS, Android, Windows);
- hosting and housing;
- software development consulting;
- applications and web sites, multimedia products;
- data analysis;
- advanced support;
- customized services.

FOXBOX

Hardware Gateway for message management

Tiny server system, powerful and flexible, **designed to send and receive SMS/MMS** using a common SIM card through web, mail server, classic and distributed applications.

SMS FoxBox is the ideal solution for mobile marketing, massive SMS campaigns, handling of business fleet, sending of news and feedback, live interaction for radio or TV shows, ecc.

HARDWARE FEATURES

- compact and noiseless system, with low power consumption;
- high computational power and SMS/MMS transmission speed;
- USB 2.0 and LAN Ethernet ports;
- hardware internal clock, solid state memory and display*.

FUNCTIONALITIES

- sending and receiving SMS/MMS;
- Gateway feature (email-to-SMS, SMS/MMS-to-email);
- Monitoring feature (Nagios, Icinga);
- web Management Interface;
- SMPP special server.

SMS FoxBox is available in various configurations. Find out more on our official web site: www.smsfoxbox.it.

(* only when available)

SMS GATEWAY

High quality massive SMS sending and receiving service

SMS sending and receiving service is suitable for:

- periodically **contacting** your customer and visitor base;
- **answering** quickly to users' requests;
- **promoting** products and services in a reliable and targeted way.

SERVICE FEATURES

- delivery granted;
- high profitability sending and speed (up to 200 SMS/sec);
- customizable sender;
- direct and targeted marketing;
- agenda handling with sending groups;
- customizable service;
- easy to use, it does not need any IT knowledge.

FUNCTIONALITIES

Customized sending and receiving:

massive campaigns using customized sender on direct connections and automatic elaboration of the answer.

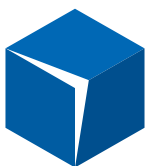

Cleansing:

to remove "syntactical" incorrect, ceased or inexistent numbers from sending lists. Outcome: up to 99% of efficiency and data correctness!

Handling of delivery reports:

Every message sent embodies a delivering notification that certifies the date and time of its reception.

Find out more on our official web site: www.smskdev.it.

SOFTWARE

Mobile App, Web application
and Desktop environment

We develop software through three separate phases.

Preliminary analysis:

we contextualize the needs of the customer in the current technological scenario, offering innovative and customized solutions and enriching the initial idea with all of our know-how and field experience.

Interface design:

we create visually appealing and intuitive graphic interfaces, for the best user experience of the customer.

Scheduling:

we adopt the best technological solution for the specific project.

MOBILE APP

We develop **applications for smartphone and tablet** for iOS, Android and Windows, using HTML5, native or hybrid technology.

“WHEREVER YOU ARE”

We develop **Client/Server applications** to access the business data in complete mobility. Thanks to our mobile applications all of the latest information reports are always available everywhere in real-time.
